

SYSTEM INTEGRATION

Shelves Tech helps SMEs and Corporate realize that the right amount of financing, materials, talent, and experience are not enough to succeed without a good communication system in place that enables smooth transaction sealing.

System integration involves integrating existing, often disparate systems in such a way "that focuses on increasing value to the customer". While at the same time providing value to the company (e.g., reducing operational costs and improving response time)with stiff competition among organizations, it presents an opportunity for them to penetrate the market. Our services will be positioned very carefully with high quality to ensure client satisfaction, supported by impeccable customer service. We offer the expertise that a proactive and market-opportunity seeking company needs to develop and maintain a good System Integration.

BUSINESS INTELLIGENCE

It is important to note that Business Intelligence goes beyond technology as includes a wide range of applications, practices, and technologies for the extraction, translation, integration, analysis, and presentation of data. BI is the process of people, practices, and technologies coming together so that organizations can make better decisions on a day-to-day basis. We help businesses for:company (e.g., reducing operational costs and improving response time)with stiff competition among organizations, it presents an opportunity for them to penetrate the market. Our services

will be positioned very carefully with high quality to ensure client satisfaction, supported by impeccable customer service. We offer the expertise that a proactive and market-opportunity seeking company needs to develop and maintain a good System Integration.

- ⇒ Our software development services help you develop manage and modernize processes to deliver digital services and boost business results.
- ⇒ Consulting Services offer world-class expertise and unique intellectual property to confidently guide you and accelerate your digital transformation journey.

ENTERPRISE INFORMATION MANAGEMENT (E-DMS)

Businesses irrespective of being a small organization or large enterprise generate huge data in their course of existence. Data is one thing, Insight is another. Capturing the Power of Information. Further, when data is managed in silos, the result is not as productive as expected, data security and compliance issues.

On the other hand, when governed and managed right, the result is higher profits, higher compliance and lower risk. Shelves Tech experts in Data management help organizations establish Data management, storage and sharing best practices and operate a Data Governance Office to ensure data quality, data security and compliance across the entire lifecycle of data.

HEALTHCARE INFORMATION MANAGEMENT

As digital approach continues to revolutionize healthcare delivery, technology is enabling new insights.

Shelves Tech offers a wide range of Hospital, Pharmacy, clinician and Laboratory solutions for healthcare organizations around the globe. Our portfolio of healthcare-related services is focused

on areas such as digital care transformation, Patient management and healthcare data analytics. Through, our digital-generation services delivery model, we provide intelligent automation at scale to accelerate innovation and transformation.

We help organizations create a digital core infrastructure to connect disparate data sources in a controlled and secure way. Our HIMS, a digital health and analytics platform that delivers the speed, scale, flexibility and continuous innovation needed to gain value from healthcare data including internet of (medical) things data and other social determinants. Some of the highlights of our offering are:

- ⇒ Safe Archive
- ⇒ The most important information is isolated from the document in the form of a Patient Record
- ⇒ Test results and selected documents made available through the Patient Portal
- ⇒ Export of documentation via XML and PDF formats
- ⇒ Support for HL7 CDA and XDS.b standards
- ⇒ Possibility of integrating many source systems provided by various manufacturers
- ⇒ Versioning and comparing the contents of medical documents
- ⇒ Use of electronic signatures, assurance of cryptographic cards
- ⇒ Possibility of scanning paper documents, presenting test results
